
```
REPOSITORY STRUCTURE -- REFERENCE SNAPSHOT
University Endowment Investing Explorer / Conduct framework
Snapshot 31 July 2026 at commit 722e0c6
```

University Endowment Investing Explorer - governed by the Conduct framework

```
Snapshot taken   31 July 2026
At commit       722e0c6 -- "Add operator manual and quick card"
Tracked files   73 (nothing untracked)
Unpushed commits 4
Root    /Users/amayb/Projects/dashboardProject/
```

This is a snapshot, not a live view. If it disagrees with the repo, the repo is right -- regenerate by re-running the commands in the last section.

Read in this order if you are new (or a fresh session)

1. CONSTITUTION.md -- the Articles, the reserved powers, how decisions get made
 2. .claude/skills/escalate/references/kernel.md -- the signed kernel these sit on
 3. PRD.md -- what we are building
 4. TASKS.md -- the ledger: what is done, what is next, and every decision ever made
 5. MANUAL.html -- how to actually drive it (or conduct/QUICKCARD.md for one page)
 6. data/README.md -- the data methodology, before touching any figure

|
| --- The data layer: source of truth for every figure
+-- data/
|   +-- README.md             the data methodology spec (~73 KB; split is overdue)
|   +-- schools.json           the 5 schools, non-financial metadata
|   +-- sources.json           95 citations
|   +-- benchmark_returns.json 130 rows -- 5 of 8 series (3 await task 1.7)
|   +-- proxy_mappings.json    empty -> task 1.7
|   \-- schools/
|       +-- yale.json          126 allocations + 26 returns
|       +-- harvard.json       77 allocations + 26 returns
|       +-- mit.json           * 42 allocations + 26 returns (18 Pool A rows)
|       +-- princeton.json     * 104 allocations + 24 returns
|       \-- stanford.json      * 0 allocations + 26 market values (documented gap)
|
| --- The guard rails
+-- scripts/
|   +-- seed.ts               args + atomic batched write; --write is opt-in
|   +-- lib/

```

```

| | \-- seed-validate.ts      * THE VALIDATOR -- sole enforcement point for data rules
| | \-- verify-seed-validator.ts * 30-case regression suite proving the validator works

| --- The app (Phases 2-6 unstarted: 2 routes exist)
+-- src/
| +-- app/
| | +-- layout.tsx      scaffold metadata still (task 6.3)
| | +-- page.tsx        scaffold starter page (task 2.1 replaces)
| | +-- globals.css
| | \-- favicon.ico     scaffold (task 6.3)
| \-- lib/
|   +-- constants.ts    8 categories - 8 series - bases - school ids
|   \-- db/
|     +-- index.ts      Neon HTTP driver
|     \-- schema.ts     * 6 tables; per-figure citation columns
+-- public/
|   file - globe - next - vercel - window .svg
|   (5 scaffold SVGs, unreferenced -- known debt)

| --- Config
+-- package.json        scripts: dev - build - lint - db:* - seed - seed:dry - seed:verify
+-- package-lock.json
+-- tsconfig.json       includes **/*.ts -- so scripts/ errors break the deploy
+-- next.config.ts
+-- postcss.config.mjs
+-- eslint.config.mjs
+-- drizzle.config.ts
+-- .gitignore

\-- --- Present locally, gitignored (never committed)
+-- .env.local          Neon connection string
+-- .vercel/            project link
+-- .next/              build output
\-- node_modules/

* = built or substantially rewritten in the framework/pilot work of 30-31 July 2026.

```

Three groupings

Group	Paths	Files	What it is
Framework	.claude/skills/ + conduct/	30	The executable rules (6), plus the audit trail of every decision made under them (24)
Data layer	data/ + scripts/	13	The figures, and the validator guarding them
App	src/ + public/ + config	19	Next.js app -- 2 routes so far; Phases 2-6 build the rest

The four documents, and why they don't overlap

File	Answers	Regenerate when
MANUAL.html	*How do I run this?*	Procedure changes
STATUS.html	*Where are we?*	Every integration
CONDUCT-DESIGN.html	*Why is it built this way?*	Framework changes

STRUCTURE.md *Where is everything?* Files are added or moved

All four are renderings. TASKS.md is the source of truth; if a document disagrees with it, the document is stale.

=====

Structural notes worth carrying

- PRD.md is deliberately out of date. It promises FY2000-FY2025 coverage for all five schools; no school discloses that much. That disagreement *is* the Checkpoint A question, which is reserved to the human -- so editing the file to match reality would itself be a violation.
- conduct/fragments/1.6/ should arguably be gone. The conductor skill says fragments are deleted after a merge lands. These 15 were kept, and they contain duplicate copies of curated school JSON -- an ambiguity about which copy wins. Decide deliberately: delete them, or amend the skill to say they're archived.
- data/README.md at ~73 KB is over its own split threshold. The plan scheduled a split into data/mappings/<school>.md after task 1.6; it is overdue, and every curation session is told to read this file in full.
- README.md at the root is untouched scaffold and points at app/page.tsx. The real path is src/app/page.tsx -- and if anyone ever created a root app/, it would silently shadow the entire src/app/ tree.
- tsconfig.json includes `/*.ts**`, so a type error anywhere -- including in scripts/ or a future test file -- fails the Vercel deploy, not just the local build.

=====

Regenerate this snapshot

```
cd ~/Projects/dashboardProject
git ls-files                                # every tracked file
git status --porcelain --untracked-files=all # anything untracked
find conduct .claude data scripts src -type f | sort
git rev-parse --short HEAD
git rev-list --count origin/main..HEAD      # unpushed
npm run seed:dry                             # live row counts
```

Re-rendering the PDF

STRUCTURE.txt is an ASCII rendering of this file (the PDF renderer's Courier font has no box-drawing glyphs, so `+ | \ -` are converted to `+ | \ -`), and STRUCTURE.pdf is rendered from the text. Landscape is deliberate: the tree's annotation column pushes lines past the ~92 characters that fit in portrait, and 13 lines were silently clipped before the switch.

```
cupsfilter -o landscape -o cpi=12 -o lpi=7 \
-o page-left=30 -o page-right=30 -o page-top=30 -o page-bottom=30 \
STRUCTURE.txt > STRUCTURE.pdf
```

Verify nothing clipped -- every non-blank source line must appear intact:

```
python3 -c "
```

```
from pdfminer.high_level import extract_text
pdf = extract_text('STRUCTURE.pdf').replace(chr(12),'')
src = [l.rstrip() for l in open('STRUCTURE.txt') if l.strip()]
print('clipped:', len([s for s in src if s not in pdf]))"
```
